

400A AND 500AMP “COOL-GRIP” AIR-COOLED SEMI-AUTOMATIC TORCHES

The **NEW** “Cool-Grip” Semi-Automatic MIG welding torch has been designed for cooler running operation.

The Cool-Grip has been engineered to increase welder comfort levels by providing relief from high temperatures in the handle when welding in higher heat applications.

The design allows for cooler operation by inhibiting the transfer of heat that is generated at the welding arc and pulled back into the handle area by way of the gooseneck.

Our “Heat Sink” gooseneck design effectively pulls heat from the front end consumables and radiates it back into the gooseneck outer jacket where it is dissipated. This unique design, which keeps consumables running cooler, is one reason why American Weldquip genuine consumables outlast other competitors.

All **American Weldquip** semi-automatic torches offer unsurpassed performance not found in competitive brands. High quality materials and workmanship go into each American Weldquip torch. Designed and engineered for fewer repairs, lower maintenance costs and increased consumable life insure a lower cost of ownership.

Demand genuine **American Weldquip** products to insure you get the best Service, Quality, Solutions and performance you expect.

The WELDQUIP ADVANTAGE

“HEAT SINK” Gooseneck Technology – The rugged gooseneck design effectively dissipates heat by providing a continuous metal to metal path from the nozzle to the front of the handle. The entire length of the outer jacket functions as a radiator pulling the heat from the front end consumables. The unique designs of the gooseneck, nozzle, diffuser, and contact tip function as a team to keep the front end consumables running cooler to insure longer life.

THREAD-ON NOZZLE – The heavy walled, nickel plated nozzles thread directly on the gooseneck to provide cooler operation and a longer lasting nozzle system. The course thread, fixed position design feature insures a constant tip to nozzles relationship and consistent welding parameters.

CONTACT TIPS – Heavy-duty, course threaded contact tips are designed to provide extended life and insure a superior electrical connection to the tip holder/diffuser.

ERGONOMICALLY DESIGNED HANDLE – LIFETIME WARRANTY - Operator comfort was given top priority in designing the lightweight yet durable two-piece handle.

COMMON CONSUMABLES– Most **American Weldquip** torches are designed to utilize the same consumables to help reduce your inventory of consumable parts.

TIME TESTED TRIGGER - LIFETIME WARRANTY – Our trigger assembly incorporates a light touch and proven reliable design. The simplicity of the design of this critical component insures its functional reliability. That is why we decided to offer a lifetime warranty on the switch contact components.

COAXIAL POWER CABLE - Manufactured to exacting **American Weldquip** specifications, our cable assembly is made from cut resistant, burn resistant, lightweight materials. The power cable features heavy duty factory crimped cable end fittings to insure a secure, positive electrical connection, producing less electrical resistance and less heat. All cables have two additional trigger leads for easy field repair should one lead get damaged. For optimum performance all power cable now utilize a HYTREL® core tube for cut, bend and kink resistance and to insure the best feedability characteristics in all applications.

SPRING CABLE SUPPORT – Heavy duty but flexible spring cable supports at both the front handle and wire feeder end of the cable assembly help prevent feedability problems in extreme bending applications and relieve cable strain which results in increased power cable life.

OPTIONS

DUAL/MULTI-SCHEDULE/MILLER CONTINUUM OPTION

The Dual Schedule allows the operator to change between two weld schedules. The Multi-Schedule is a momentary switch and can be used to increase or decrease through numerous preset weld schedules. Both options can be used to change schedules "on the fly".

EXTENDED TRIGGER OPTION

For increased personal welder comfort. Manufactured from Heavy-Duty Aluminum. Ensures durability and resists breaking as compared to plastic triggers.
